Education

Oregon State University Expected Jun. 2029

B.S. in Computer Science, Software Engineering | GPA: 3.80 *Corvallis, OR*

- **Activities:** UI/UX Club (Treasurer), Design for America, Society of Asian Scientists and Engineers (SASE)

Projects

MyGuard: AI Lifeguard Assistant | *Hackathon Project* | *React, TypeScript, MediaPipe* QuackHacks 2026

- Built a browser-based drowning detection pipeline on MediaPipe pose estimation, running fully client-side (WASM/GPU) at roughly 30 FPS across 33 body landmarks per swimmer so no video ever leaves the device
- Designed a multi-signal risk-scoring engine combining torso angle, arm position, submersion inferred from landmark visibility, and motion stasis, with heuristics tuned to suppress false positives from normal swimming
- Implemented a multi-person tracker holding persistent swimmer identities across frames and alerting that fires only after 4+ seconds of sustained risk; deployed on DigitalOcean and validated against real drowning-incident footage

Pitcher Strikeout Prediction Model | *Personal Project* | *Python, pandas, scikit-learn, pybaseball* 2026 – Present

- Built an end-to-end pipeline predicting single-game pitcher strikeout totals from MLB Stats API game logs and pitch-level Statcast data pulled via pybaseball
- Engineered strictly pre-game features (rolling average velocity, rolling whiff rate, rest days, home/away) and audited the feature set to eliminate leakage from post-game statistics
- Benchmarked random forest against linear regression and a naive baseline on a time-based split; random forest modestly beat baseline, quantifying how much single-game strikeout variance is irreducible noise

Aux Wars | *Hackathon Project* | *React, Firebase, YouTube API, Tailwind CSS* BeaverHacks 2026

- Built an account-free shared jukebox where users join by 6-character room code and vote on the next song
- Implemented a live vote-sorted queue on Firebase Realtime Database syncing across all participants, and integrated YouTube Data API v3 for in-app search, embedded playback, and a synchronized play-on-all-devices mode
- Built host/guest permissions, presence tracking, inactivity timeouts, and kick logic, and designed automatic queue advancement to avoid race conditions between clients; deployed to Vercel

Experience & Leadership

Treasurer Sep. 2025 – Present

OSU UI/UX Club *Corvallis, OR*

- Manage the club budget and fundraiser requests, working with university administration to secure funding for events such as member boba socials
- Co-plan and run 6 events per quarter (workshops, design critiques, networking), averaging 30–45 attendees each

UI Designer Spring 2026

Design for America, Oregon State University *Corvallis, OR*

- Led visual and UI design on a 5+ person team proposing a website redesign for Local Boys, a local restaurant
- Restructured navigation, page layout, and menu presentation, and produced the visual design and high-fidelity Figma mockups that teammates built into a coded prototype

Server May 2026 – Oct. 2026

La Provence *[City], OR*

- Served guests in a full-service restaurant, coordinating orders and timing with kitchen staff and handling special requests directly during busy shifts
- Trained new staff on service and restaurant procedures

Tennis Captain & Junior Coach Feb. 2023 – May 2025

Tigard High School *Tigard, OR*

- Captained varsity and led practices for a 25-player JV squad, designing drills and managing player development
- Coached 10+ junior players one-on-one across a summer program, adapting instruction to individual skill levels

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, HTML/CSS
Data & ML: pandas, NumPy, scikit-learn, MediaPipe, feature engineering
Frameworks & Libraries: React, Tailwind CSS, Vite, React Router, Firebase
Developer & Design Tools: Git, GitHub, VS Code, Linux/CLI, Vercel, DigitalOcean, Figma
